Saudi Arabian Oil Co.

Q3 2024 earnings preview

Oil production in the Kingdom averaged around 8.99mmbpd for Q32024 while Crude oil prices averaged around \$78.7/bbl in Q3 2024 vis-à-vis \$85.0/bbl in Q22024 (company realized prices: \$85.7/bbl) and \$85.9/bbl in Q32023 (realized: \$89.3/bbl). Q32024 witnessed significant volatility in Brent prices on account of geopolitical tensions and weak macro indicators. To enhance market stability, OPEC extended the output cuts until the end of November 2024. Given the weak demand for petroleum products, refinery margins continued to be under pressure during the quarter. In this backdrop, we anticipate Q32024 revenues to be lower on a y-o-y as well as q-o-q basis. The downstream business, in particular, could be under pressure due to weak refining margins and inventory revaluation losses. Accordingly, net profit before minority is expected to decline by 16.7% y-o-y and 6.6% q-o-q to SAR 101.8 bn.

Explanation of Al Rajhi Capital's rating system

Al Rajhi Capital uses a three-tier rating system based on absolute upside or downside potential for all stocks under its coverage except financial stocks and those few other companies not compliant with Islamic Shariah law:

"Overweight": Our target price is more than 10% above the current share price, and we expect the share price to reach the target on a 12 month time horizon.

"Neutral": We expect the share price to settle at a level between 10% below the current share price and 10% above the current share price on a 12 month time horizon.

"Underweight": Our target price is more than 10% below the current share price, and we expect the share price to reach the target on a 12 month time horizon.

"Target price": We estimate target value per share for every stock we cover. This is normally based on widely accepted methods appropriate to the stock or sector under consideration, e.g. DCF (discounted cash flow) or SoTP (sum of the parts) analysis.

Please note that the achievement of any price target may be impeded by general market and economic trends and other external factors, or if a company's profits or operating performance exceed or fall short of our expectations.
